SQL Database in Microsoft Fabric Workshop

Workshop Title: Build AI-Ready Apps with SQL database in Microsoft Fabric

Fabric + SQL Conference Atlanta – Tue, March 17, 2025

Before attending this workshop, participants should meet the following prerequisites:

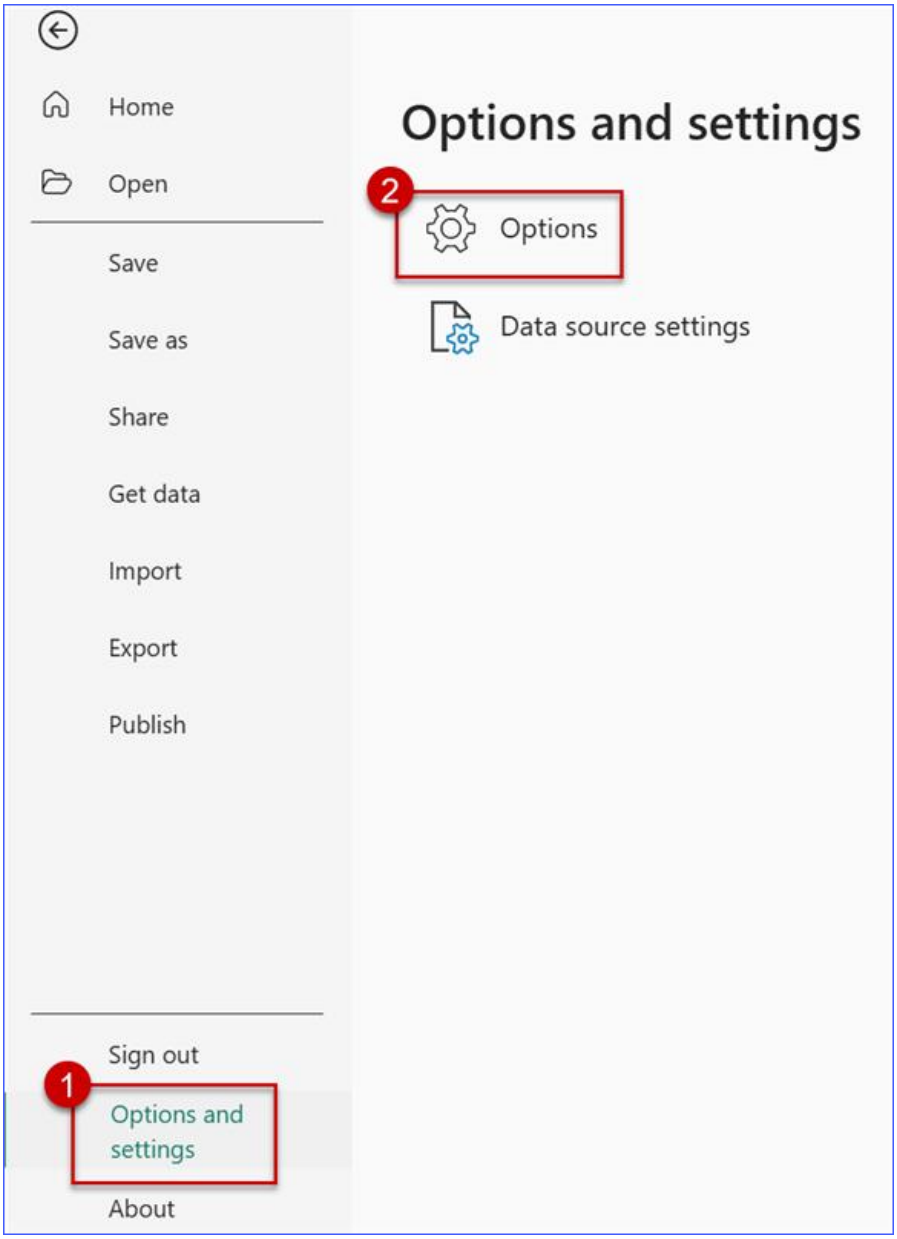
Technical Knowledge

Good understanding of relational database, app dev and data & analytics platform concepts

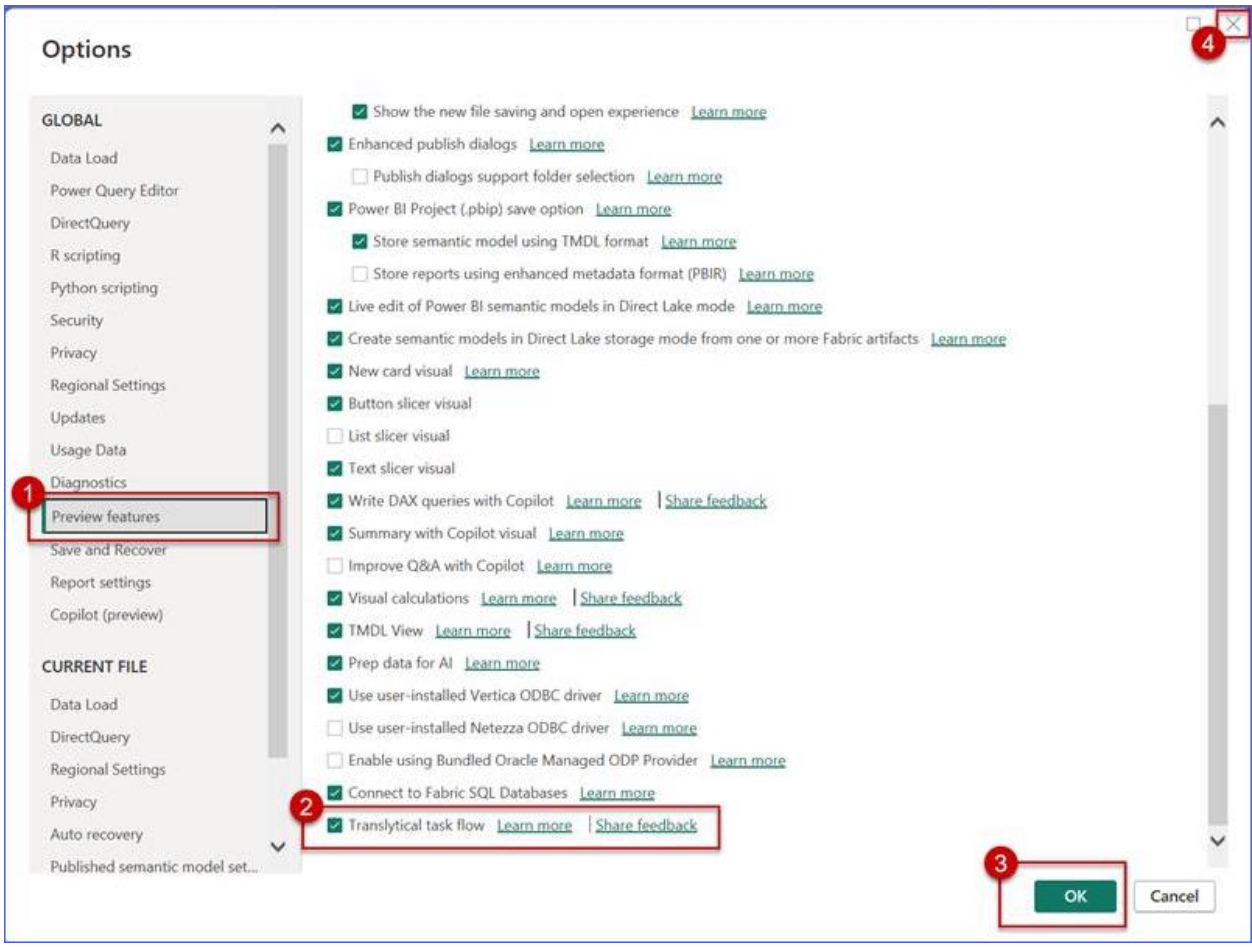
- Hands-on experience writing T-SQL queries, including:
  - SELECT statements, JOINs, Basic aggregations
  - Familiarity with SQL Server architecture (databases, tables etc)
- Build apps using Visual Studio Code
- Familiarity with data and analytics concepts, such as datasets and reporting

Tools & Software

1) Bring your own laptop. Windows PC preferred as Power BI Desktop only works on Windows OS with Edge as a modern web browser
2) You will need a Github account and an empty git repository in GitHub. If you don't have an account, you can create a free account through https://github.com/join
3) Install Visual Studio Code & Python Programming Language
   a. Install MSSQL extension for VS Code
   b. Install Fabric extension for VS Code
   c. Install Python 3.14.2
4) For an optional lab/exercise, install Power BI Desktop. If not installed on your machine, download it from the official site: https://powerbi.microsoft.com/desktop
   - Launch and Open Power BI Desktop
   - From the top menu bar, click on **File**
   - 
   - Select **Options and Settings → Options**



- In the Options window, go to **Preview features**
    - Select and check the following features:
        - **Translytical task flow**
        - **Button slicer visual**
        - **Text slider visual**



- Restart Power BI Desktop to apply the changes

** Note: All prerequisite activities must be completed prior to class - there will not be lot of time to perform these operations during the workshop
